

As Checkcard issuance and transaction volumes continue to grow, financial institutions need to mitigate fraudulent transaction activity. The Actimize fraud solution is available for all Advantage Network products and monitors all card activity including ATM, PIN Debit and signature transactions.

Actimize is a fraud monitoring solution that uses dynamic profiling, worldwide card activity, and real-time updates to scoring models in order to provide more accurate results and fewer false positives.

Actimize uses neural-network technology to help financial institutions minimize fraud by calculating a score based on previous confirmed fraud authorizations. By comparing previous confirmed fraud authorizations to current suspected fraud authorizations, false positives are minimized.

Actimize monitors transactions in near-real time, within minutes of the transaction being authorized, and does not affect the customer authorization response at the point of sale. Risk Management fraud analysts monitor alerts 24 hours a day, 365 days a year, including holidays.
